

# Wan 2.2 Ad Prompts

## Avatar generation

Replace the woman from @img1 with the man from @img2. Keep identical camera angle, framing, background, lighting, pose composition, and depth of field from the first image. The result should look like a single untouched photograph, not a composite. The woman should be integrated naturally into the scene — matching light direction, shadow softness, color temperature, and focus plane. Her expression, pose, and body alignment should mirror the man's original posture and placement exactly. Ensure skin tone and lighting reflections match the first image's ambient conditions. Output should be photorealistic, high-resolution, cinematic realism, no artifacts or painterly effects. Style directives: ultra-realistic photo quality consistent shadow continuity and perspective DSLR 50 mm lens look soft natural light falloff crisp edges, no blur blending @img2@img1 @img2

## Swap Avatar into base, screenshotted image

Replace the man from @img2 with the woman from @img1. Keep identical camera angle, framing, background, lighting, pose composition, and depth of field from the first image. The result should look like a single untouched photograph, not a composite. The woman should be integrated naturally into the scene — matching light direction, shadow softness, color temperature, and focus plane. Her expression, pose, and body alignment should mirror the man's original posture and placement exactly. Ensure skin tone and lighting reflections match the first image's ambient conditions. Output should be photorealistic, high-resolution, cinematic realism, no artifacts or painterly effects. Style directives: ultra-realistic photo quality consistent shadow continuity and perspective DSLR 50 mm lens look soft natural light falloff crisp edges, no blur blending @img1 @img2
